

DEPLOYMENT OF APP IN IBM CLOUD

DEPLOY IN KUBERNETES CLUSTER

1. Target the IBM Cloud Kubernetes Service region where you want to work.

```
ibmcloud cs region-set us-south
```

2. Set the context for the cluster in your CLI.

- a. Get the command to set the environment variable and download the Kubernetes configuration files.

```
ibmcloud cs cluster-config cluster_kunal
```

- b. Set the KUBECONFIG environment variable. Copy the output from the previous command and paste it in your terminal. The command output should look similar to the following.

```
> export
```

```
KUBECONFIG=/Users/$USER/.bluemix/plugins/container-service/clusters/<  
cluster_name >/< cluster_configuration_file.yaml>
```

3. Verify that you can connect to your cluster by listing your workernodes.

```
kubectl get nodes
```

4. Create the deployment.

```
kubectl create -f deployment.yaml
```

5. Create the service.

```
kubectl create -f service.yaml
```

6. Look at the Kubernetes dashboard from the IBM KubernetesService overview page.

Config Maps

Downstream Kubernetes Clusters

Deployments

| Name | Labels | Pods | Age | Images |
|-----------------------|----------------|-------|-----------|--|
| flask-node-deployment | app: flasknode | 1 / 1 | 5 minutes | registry.ng.bluemix.net/flask-node/app |

Pods

| Name | Node | Status | Restarts | Age | CPU (cores) | Memory (bytes) |
|--|--------------|---------|----------|-----------|-------------|----------------|
| flask-node-deployment-5cd96cf6bc-d6n6x | 10.47.79.201 | Running | 0 | 5 minutes | 0 | 19.352 Mi |

Replica Sets

| Name | Labels | Pods | Age | Images |
|----------------------------------|---|-------|-----------|--|
| flask-node-deployment-5cd96cf6bc | app: flasknode pod-template-hash: 1785279267 | 1 / 1 | 5 minutes | registry.ng.bluemix.net/flask-node/app |

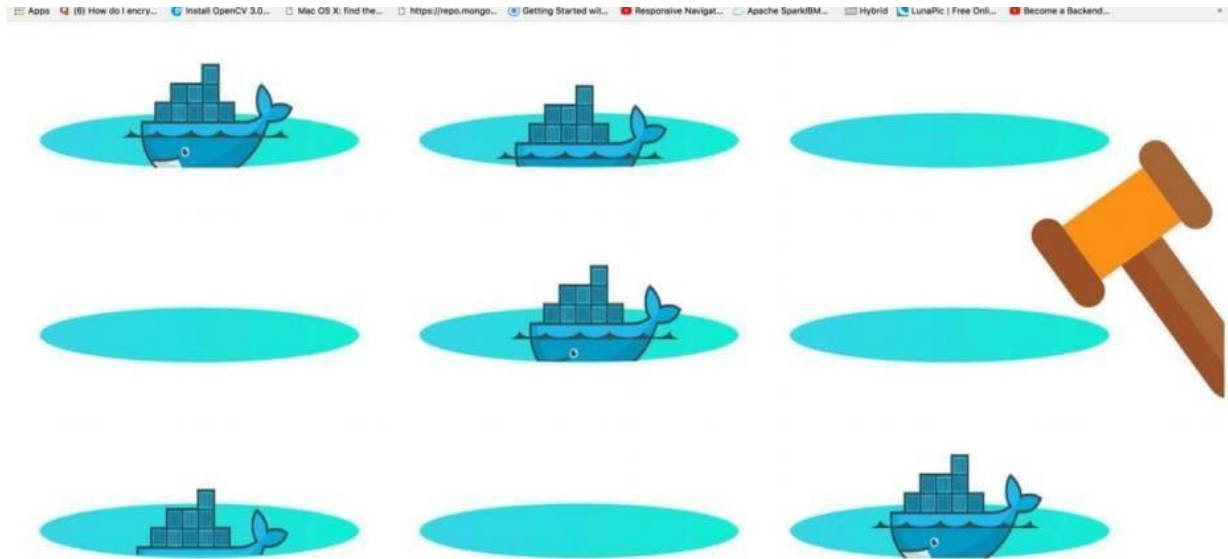

Discovery and Load Balancing

Services

| Name | Labels | Cluster IP | Internal endpoints | External endpoints | Age |
|-----------------------|--|---------------|---|--------------------|----------|
| kubernetes | component: apiserver provider: kubernetes | 172.21.0.1 | kubernetes:443 TCP kubernetes:0 TCP | - | a minute |
| flask-node-deployment | - | 172.21.104.14 | flask-node-deployment:5000 TCP flask-node-deployment:0 TCP | - | a minute |

Config and Storage

7. Finally, go to your browser and ping the Public IP of your workernode

SAMPLE:

^^^

```
$ kubectl apply -f ./deploys/k8s-deployment/deployment.yaml
deployment.apps/k8s-nginx-deployment created
```

^^^

RUN THE APPLICATION

^^^

```
$ kubectl port-forward svc/k8s-nginx-deployment 8080:80
```

^^^

VERIFY THE APPLICATION RUNNING IN THE CLUSTER

...

\$ kubectl get pods

| NAME | READY | STATUS | RESTARTS | AGE |
|---------------------------------------|-------|---------|----------|-----|
| k8s-nginx-deployment-68d8f8f8f4-f4x6x | 1/1 | Running | 0 | 30s |

...

...

\$ curl localhost:8080
